

# re-Q

**Premium active high-level speaker inputs to line-level RCA outputs processor with automatic remote out, EBC remote control and Smart Digital Bass Restoration (re-Q)**

## Introduction

The re-Q is the most qualitative and complete tool to upgrade your factory head-unit into a wonderful sound quality after market radio. Nothing is missing : two stereo 10V RCA outputs, an EBC remote control, an automatic remote and the re-Q that restores the bass removed by the car manufacture. And of course, the sound quality remained our first concern during the development.

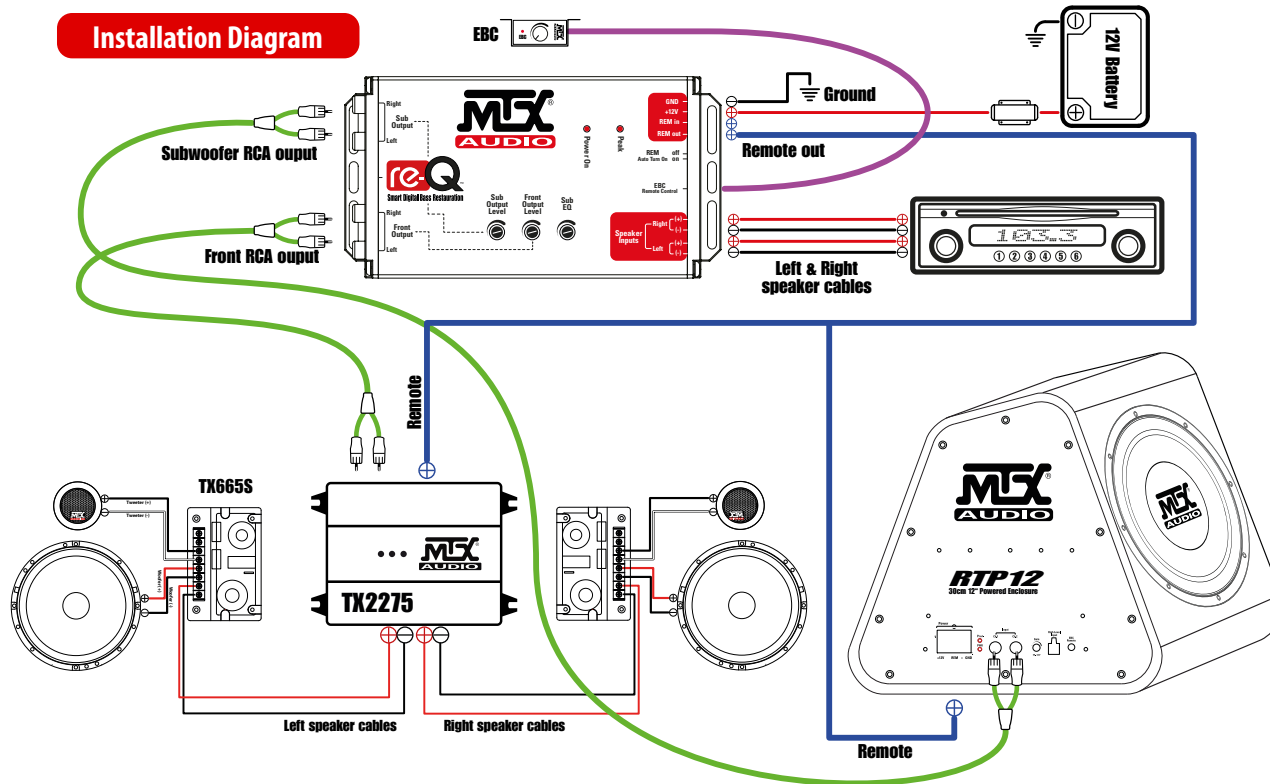

**Turns your factory radio into a high-quality after market head-unit**

**Four 10V RMS RCA outputs with EBC on the sub output**

**Smart Digital Bass Restoration (re-Q) to bring back the bass removed by the car manufacturer to protect their poor quality factory speakers**

**Auto turn-on with Remote out to switch everything on and off**

## Installation Diagram

## Specifications

- High-level inputs to line-level outputs processor
- re-Q processing : smart digital bass restauration
- EBC (external bass control) on the sub outputs
- Two channel speaker inputs (left+right)
- Speaker inputs can accept up to 440W RMS
- 4x 10V RMS RCA outputs with level controls
- Auto turn-on feature with Remote output
- Total Harmonic Distortion : >0.01%
- Signal to Noise: >112 dB
- Frequency Response: 20Hz-80kHz ±0,5dB
- Dimensions 168x90x28mm (feet included)
